Salary: \$25/hrs. | Hours

Related Competencies:

Complex Problem Resolution, Technical Support, Technology Utilization, Data Recovery, Bug Identification

Offered technical support for several businesses, including interpreting networks, repairing printers and computers, and installing and modifying software to facilitate all employees. Ensured optimal employment of technologies to boost system performance, secure and manage important data, and fix technical errors.

Selected Highlights:

- Performed troubleshooting to identify problems regarding basic operations of internet connectivity.
- Oversaw all facets of computer help desk support, such as maintenance and installations of technical systems.
- Prepared necessary documents related to configuration, testing, and troubleshooting for network solutions.
- Recovered lost and corrupt documents and saved files to support backup for future use.
- Upgraded computer software and hardware, simplifying utilization of technology across various departments.

Viennam Solution | Sai Gon, Viet Nam
Full Stack Web Developer

January 2012 to June 2013

Supervisor Name: Huy Khac | Salary: \$1500/month

Related Competencies:

Website Development, Continuous Process Improvement, Software Development & Testing, Server Configuration

Built and monitored applications, website content, web pages, and software solutions to raise awareness for continual enhancement. Provided exceptional assistance to redesign, update, and implement website content, codes, plugins, and digital products, ensuring engagement and retention of site visitors. Prepared and maintained important software documentation for numerous purposes.

Selected Highlights:

- Met and exceeded budget specifications by executing ad campaigns and Google-based SEO.
 - Compiled and improved specifications and requirements by identifying technical requirements.
 - Prepared web pages with minimal resizing, turning, and scrolling for easy reading and navigation.
 - Adapted and incorporated emerging technologies and new business trends in several operations and functions.
 - Created dynamic and interactive website content using numerous technical features to increase site speed and acquire more traffic to website.
 - Developed website layout/user interface using standard HTML/CSS practices and integrated data from various back-end services and databases.
 - Delivered exceptional knowledge to numerous team members regarding current quality control projects to eliminate discrepancies and obtain desired results.
 - Identified and mitigated software errors/bugs and matched visual design intent by coordinating with multiple web designers and marketing teams.
 - Leveraged APS.NET, HTML, and Coding languages for designing websites in accordance with customer requirements, such as selling products, introducing company, contacting clients, and managing employees.
 - Spearheaded utilization of technical languages, software, MVC frameworks, and database (e.g., Python, HTML, JavaScript/jQuery, CSS, MS SQL, MySQL, SQLite, SON, XML, Django, C-Sharp, and AJAX).
-
